## **Listing of Claims:**

This listing of the claims will replace all prior versions, listings, of claims in the application:

- 1. (currently amended) A fuel An electrochemical cell, comprising:
  - a renewable active metal anode, configured for supplementation of the active metal;

a cathode structure comprising a <u>an</u> electronically conductive component, an ionically conductive component, and a fluid oxidant;

an ionically conductive protective membrane on the first surface of the anode, the membrane comprising,

one or more materials configured to provide a first surface chemically compatible with the active metal of the anode in contact with the anode, and a second surface substantially impervious to and chemically compatible with the cathode structure and in contact with the cathode structure.

- 2. (original) The cell of claim 1, wherein the ionically conductive protective membrane comprises a composite, the composite comprising,
  - a first material component in contact with the anode that is ionically conductive and chemically compatible with the active metal of the anode; and
  - a second material component in contact with the first material component, the second material being substantially impervious, ionically conductive and chemically compatible with the first material component and the cathode structure.
- 3. (original) The cell of claim 1, wherein the ionic conductivity of the protective membrane is at least  $10^{-5}$  S/cm.
- 4. (withdrawn) The cell of claim 1, wherein the cathode oxidant comprises air.
- 5. (original) The cell of claim 1, wherein the cathode oxidant comprises water.
- 6. (withdrawn) The cell of claim 1, wherein the cathode oxidant comprises hydrogen peroxide.
- 7. (original) The cell of claim 1, wherein the protective membrane is a composite laminate.
- 8. (original) The cell of claim 1, wherein the protective membrane is a graded composite.

- 9. (original) The cell of claim 1, wherein the active metal of the anode is lithium or a lithium alloy.
- 10. (currently amended) The cell of claim 2, wherein the first component comprises a material selected from the group consisting of a composite reaction product of active metal with one selected from the group consisting of Cu<sub>3</sub>N, active metal nitrides, active metal phosphides, and active metal halides, and active metal phosphorus oxynitride glass.
- 11. (currently amended) The cell of claim 2, wherein the first component comprises a material selected from the group consisting of a composite reaction product of active metal with one selected from the group consisting of Cu<sub>3</sub>N, Li<sub>3</sub>N, Li<sub>3</sub>P and LiI, LiBr, LiCl, LiF, and LiPON.
- 12. (original) The cell of claim 2, wherein the second component comprises a material selected from the group consisting of glassy or amorphous metal ion conductors, ceramic active metal ion conductors, and glass-ceramic active metal ion conductors.
- 13. (original) The cell of claim 2, wherein the second component is an ion conductive glass-ceramic having the following composition:

Composition	mol %
P <sub>2</sub> O <sub>5</sub>	26-55%
$SiO_2$	0-15%
$GeO_2 + TiO_2$	25-50%
in which GeO <sub>2</sub>	0—50%
${ m TiO_2}$	0—50%
$ZrO_2$	0-10%
$M_2O_3$	0 < 10%
$Al_2O_3$	0-15%
$Ga_2O_3$	0-15%
Li <sub>2</sub> O	3-25%

and containing a predominant crystalline phase composed of  $\text{Li}_{1+x}(M,\text{Al},\text{Ga})_x(\text{Ge }_{1-y}\text{Ti}_y)_{2-x}(\text{PO}_4)_3$  where  $X \le 0.8$  and  $0 \le Y \le 1.0$ , and where M is an element selected from the group consisting of

Nd, Sm, Eu, Gd, Tb, Dy, Ho, Er, Tm and Yb and/or and  $\text{Li}_{1+x+y}Q_x\text{Ti}_{2-x}\text{Si}_yP_{3-y}O_{12}$  where  $0 < X \le 0.4$  and  $0 < Y \le 0.6$ , and where Q is Al or Ga.

- 14. (original) The cell of claim 1, wherein the anode comprises solid state lithium metal.
- 15. (withdrawn) The cell of claim 1, wherein the anode comprises lithium metal dissolved in a suitable solvent.
- 16. (withdrawn) The cell of claim 15, wherein the solvent is selected from the group consisting of hexamethyl phosphoramide (HMPA), ammonia, organic amides, amines and combinations thereof.
- 17. (withdrawn) The cell of claim 15, wherein the solvent comprises hexamethyl phosphoramide (HMPA).
- 18. (withdrawn) The cell of claim 15, wherein the solvent comprises methylamine.
- 19. (canceled)
- 20. (currently amended) The cell of claim 14, wherein the anode is supplemented by fresh lithium metal by contacting the existing lithium of the anode with additional lithium having a lithium bonding coat of a thin layer of Ag, Al, Sn or other Li alloy-forming metal-such that the additional lithium bonds to the original lithium.
- 21. (currently amended) The cell of claim 20, wherein the bonding coat is Ag or other lithium alloying metal.
- 22. (withdrawn) The cell of claim 15, wherein bulk lithium metal is fed to the solution keeping the solution near or at the lithium solubility limit.
- 23. (canceled)
